                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The paph gene of S.pristinaespiralis is involved in the biosynthesis of 4 CC -dimethylamino-L-phenylalanine (DMPAPA), a precursor for pristinamycin CI A. Upstream of the paph gene, on the complementary strand, is the snbh CC gene coding for 3-hydroxypicolinic acid-AMP ligase. The region between these two genes was sequenced and two open reading frames were identified. The first (piph) decodes to an amino acid sequence with the bomology to ornithine cyclodeaminase from Agrobacterium tumefaciens. The CC homology to ornithine cyclodeaminase from Agrobacterium tumefaciens. The CC leading to product is likely to catalyse the cyclo-deamination of lysine, leading to production of pipecolic acid. Mutations in the piph gene were shown to affect pipecolic acid synthesis but not the synthesis of 3-cc hydroxypicolinic acid. The second open reading frame (snbf) could be decoded to give a product with homology to hydroxylases of the cytochrome CC decoded to give a product with homology to hydroxylases of the cytochrome CC strains of S.pristinaespiralis which are unable to produce the antiblotic pristinaespiralis which are unable to produce the articles and the pristinaespiralis which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 899;

```
pristinamycin IA. The region between these two genes was sequenced and two open reading frames were identified. The first (papc) was on the complementary strand and decodes to an amino acid sequence with homology to the region of E.coli TyrA which has been implicated in aromatisation reactions. The Papc gene product is likely to be involved in a similar aromatisation of 4-deoxy 4-amino prephenate to give 4-amino phenylpyruvate during DMPAPA synthesis. The second open reading frame (papB) could be decoded to give a product with homology to the region of TyrA which has chorismate mutase activity. The PapB gene product is likely to catalyse the isomerisation of 4-deoxy 4-amino chorismate to 4-deoxy 4-aminoprephenate. Disruption of the papB and papc genes can be used to produce strains of S.pristinamycin I but which are unable to produce the antibiotic pristinamycin I but which may be able to produce new, modified forms of it

The invention discloses the polynucleotide sequences of these gene clusters, and the proteins encoded by the open reading frames (ORFs) within the gene clusters. Also disclosed are methods for producing an antibiotic and protecting a plant against damage from albicidin and against phytotoxic damage. The present sequence represents an ORF from the Xanthomonas albilineans XALB1 gene cluster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New transformed host cell, polyketide antibiotics for or damage against albicidin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       멂
                                                                                                                                                                                                                                                                                                                                                                       polyketide
or damage a
                                             The present invention relates to a novel Albicidin family of antibiotics produced by the expression of biosynthetic gene clusters from Xanthomonas albilineans designated as XALB1, XALB2 and XALB3 (albicidin biosynthetic gene clusters 1, 2 and 3). The invention discloses the polynucleotide sequences of these gene clusters, and the proteins encoded by the open reading frames (ORFs) within the gene clusters. Also disclosed are methods for producing an antibiotic and protecting a plant against damage from albicidin and against phytotoxic damage. The present sequence represents Xanthomonas albilineans XALB1 gene cluster.
                                                                                                                                                                                                                                                                                                                                                                                             New transformed host cell, useful for polyketide antibiotics for protecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Albicidin family;

                                                                                                                                                                                                                                   particularly involved in the inflammatory lesions associated with acme vulgaris. A method for detecting the presence or absence of P. acmes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies specific for P. acmes proteins. These antibodies can be used to downregulate expression and activity of P. acmes polypeptides and therefore treat P. acmes infections. The antibodies may also be used as diagnostic agents for determining P. acmes presence, for example, by enzyme linked immunosorbent assay (ELISA). This sequence encodes the polypeptides shown in AAU46704-AAU46985 and AAU47509. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                          SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved infections of bone, joints and the central nervous system, however it is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences AAS59806-AAS59804 represent DNA molecules encoding Propionibacterium acnes immunogenic polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     21-APR-2000; 2000US-0199047P.

                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC The invention relates to an isolated polynucleotide (ACF64435-ACF64733) CC encoding a Propionibacterium acnes protein. The invention also relates to polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to CC polypeptides encompasses expression vectors and host cells comprising a CC polynucleotide of the invention; antibodies against polypeptides of the invention; a comprising a polypeptide of the invention; a complete that expression vectors and host cells comprising a polypeptide of the invention; a complete that expression in the polypeptides, antibodies, fusion proteins, or cell populations, or confident; and a method; a vaccine composition (comprising P. acnes polypeptides, polynucleotides, antibodies, fusion proteins, or cell populations, or contient; and a method for inhibiting the presence of P. acnes in a compation. The p. acnes polypeptides, polynucleotides, antibodies, fusion conteins, or cell populations or antigen-presenting cells that express the polypeptides are useful for diagnosing, preventing or treating acnes concein a completion of an immune response specific for a P. acnes concein and the kit is useful for performing a diagnostic assay. The present cell and the kit is useful for performing a diagnostic assay. The present cell in the invention. Note: The sequence data for this patent did not form to concein the invention. Note: The sequence data for this patent did not form to concein the invention of a figure of the printed specification, but was obtained in electronic format cell and the kit is useful for interesting acne, concein the printed specification, but was obtained in electronic format cell and the content of the printed specification, but was obtained in electronic format cell and the content of the printed specification, but was obtained in electronic format cell cell and the content of the content of the content of the content o

                                                                                                                                                                                                                                                                                                                                                                                                                                 the 6213 antisense sequences given in the specification where expression (C) of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated concleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway (c) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway (c) required for proliferation, or that inhibits cellular proliferation; (8) (8) identifying a gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the extent of which each of the strains in present in a culture or collection of contiferation of an organism. The antisense nucleic acids required for cellular proliferation to solate candidate molecules for rational cord and second and content of acids and content or solates candidate molecules for rational cord and content or collection of solate candidate molecules acids are useful.

Sequences ABD01397-ABD17967 represent P. aeruginosa polynucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment of pathological conditions resulting from bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       seqdata.uspto.gov/sequence.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     prophylaxis and treatment of pathological conditions resulting from

                                                 of Pseudomonas species using biochip technology. Sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABD1397-ABD17967 represent P. aeruginosa polymucleotides of the invention. Note: The sequence data for this patent did not form part of the printed specification but was obtained in electronic format from USPTO at sequence.html
                                                                                                                                                                                                                                                                                                                         The invention relates to Pseudomonas aeruginosa polypeptides and the polynucleotides encoding them. The sequences are useful in diagnosis and therapy of pathological conditions, as molecular targets for diagnostics prophylaxis and treatment of pathological conditions resulting from a bacterial infection, for evaluating a compound, such as a polypeptide, for the ability to bind a P. aeruginosa nucleic acid, as components of effective antibacterial targets, as targets for antibacterial drugs, including anti-p. aeruginosa drugs, as templates for recombinant production of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused infection, and in detection of P. aeruginosa sequences or other sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide, useful as molecular targets for diagnostics, prophylaxis and treatment o

```
CC an isolated polypoptide that is encoded by the polynucleotide (1); (2) an C expression vector comprising the novel isolated polynucleotide (1); its CC complement, degenerate variant or fragment; (3) a genetically engineered CC complement, transferted, transformed or infected with the vector of (2); (6) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its complement, biological composition vector; (6) a pharmaceutical composition comprising the complement, biological compression vector; (6) a pharmaceutical composition comprising the polypeptides of (1), their biological equivalent or fragment; (8) immunising against Alloiococcus otitidis by administering to a host the cimmunogenic composition; (9) detecting and/or identifying Alloiococcus otitidis in the biological sample; (10) a kit comprising a container containing the novel polynucleotide, its degenerate variant or fragment, (6) or the antibody of (4); and (11) producing a polypeptide by culturing the polypeptides of the culture. (7) can be used from the culture. (7) can be used for treating and diagnosing diseases, drug contidies, polypeptides, antibodies and compositions of the present contidies. The present sequence encodes an Alloiococcus otitidis antigen from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated polynucleotide (I) of Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring effects during drug clinical trials.

                                                                         á
                                                                                                                                                                 CC Alloicoccus otitidis genemic DNA, which encodes an antigenic protein.
CC Alloicoccus otitidis is a Gram-positive bacterium. Also described: (1)
CC an isolated polypeptide that is encoded by the polymucleotide (1); (2) an isolated polypeptide that is encoded by the polymucleotide (1); (2) an isolated polypeptide that is encoded by the polymucleotide (1); its complement, degenerate variant or fragment; (3) a genetically engineered host cell, transfected, transformed or infected with the vector of (2); (2) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide, its complement, biological equivalent or fragment, or the polypeptide that is comprised in the CC expression vector; (6) a pharmaceutical composition comprising the composition comprising the polypeptide of (1), their biological equivalent or fragment; (8) of the polypeptides of (1), their biological equivalent or fragment; (8) immunising against Alloicoccus otitidis by administering to a host the containing the novel polymucleotide, its degenerate variant or fragment; (8) of the antibody of (4); and (11) producing a polypeptide by culturing the containing the novel polymucleotide, its degenerate variant or fragment; (7) appetide from the culture. (1) can be used in gene therapy. The colympeptide from the culture. (1) can be used in gene therapy. The colympeptide from the culture of can be used in gene therapy. The colympeptide for treating and diagnositions of the present contitions. The present seguence repressing and detecting Alloicoccus otitidis. The present seguence repressing and detecting Alloicoccus cotitidis. The present seguence represents the entire genome of cotitidis, which is given in the exemplification of the

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DB DB

Sequence 14, Application US/09987614A

Patent No. 6833382

GENERAL INFORMATION:
APPLICANT: BLANC, Veronique
APPLICANT: BAMAS-JACQUES, Nathalie
APPLICANT: BAMAS-JACQUES, Nathalie
APPLICANT: BARAS-JACQUES, Nathalie
APPLICANT: BARAS-JACQUES, Nathalie
APPLICANT: BARRIERE, Joen-Claude
APPLICANT: DEBUSSCHE, Laurent
APPLICANT: PAMEIS, Jean-Claude
APPLICANT: PAMEIS, Jean-Marc
APPLICANT: DUTRUC-ROSSET, Gilles
TITLE OF INVENTION: Streptogramins And Method
TITLE OF INVENTION: Mutasynthesis
FILE REFERENCE: Streptogramin genes
CURRENT APPLICATION NUMBER: US/09/987,614A
